Early Learning in Colorado

By Jessica Troe  July 2016

Colorado families need access to affordable child care and preschool to support working parents and to ensure that children start kindergarten ready to learn. During the first five years of life, children learn critical skills such as language and socio-emotional regulation, which provide a foundation for lifelong learning. High-quality preschool and child care can support healthy development and enable parents to work. Unfortunately, too many children are left behind by the status quo. In fact, differences in children’s cognitive abilities by income are evident at only 9 months old and significantly widen by the time children are age 2. Early learning has positive impacts for children, families, and the economy. It’s time to work to put these programs within reach.

Colorado families need access to high-quality child care and preschool
Colorado has 382,677 children under age 6, 63 percent of whom have all available parents in the workforce.

High-quality child care and preschool programs help narrow school readiness gaps, which is particularly important for children of color and those living in low-income families.

The cost of child care is out of reach for families
Annual costs at a child care center in Colorado average $23,036 for an infant and a 4-year-old, which is 32 percent of the median income for families with children.

For low-income families and people of color, the average cost of child care would constitute the majority of income in most cases.

The current child care system is failing Colorado families
On average, the Child Care and Development Block Grant, or CCDBG, serves only 8 percent of federally eligible children in Colorado. This results in only 16,700 Colorado children served through CCDBG funds. Of those served, 76 percent attend licensed or regulated center-based care.

Children living in low-income families
Share of children younger than age 6 living in low-income households

Race and ethnicity of children younger than age 5
56% White
4% African American
32% Latino
3% Asian
1% American Indian and Alaska Native
<0.5% Native Hawaiian and Other Pacific Islander
5% Two or more races

45.5 percent of Colorado’s children under age 5 are children of color.
Colorado families need greater access to high-quality preschool programs
The Colorado Preschool Program provides preschool for eligible 3- and 4-year-olds. Eligibility requirements include risk factors such as being in foster care, a family history of abuse or neglect, and low parental education levels, as well as locally determined risk factors. This preschool program meets 6 quality benchmarks set by the National Institute for Early Education Research and spends $3,116 annually per student.

In Colorado, 14 percent of 3-year-olds and 31 percent of 4-year-olds are enrolled in a public preschool program.

Investing in high-quality early learning programs affects economies
Making child care more affordable for families can increase mothers’ workforce participation, resulting in a boost to the state’s economy.

In Colorado, if child care costs did not exceed more than 10 percent of a family’s income, the state’s economy would increase nearly $44.37 million.

We can do better for Colorado families
The Center for American Progress proposes two solutions to put high-quality child care and preschool within reach for Colorado families and create an early childhood learning continuum for children:

- A new High-Quality Child Care Tax Credit would help families afford high-quality care for their children. This tax credit would benefit an estimated 90,400 children in Colorado and save families an average of $9,943 per year on child care costs.

- Voluntary universal preschool for all 3- and 4-year-olds. This would increase access for 91,700 children in Colorado.
