Ohio families need access to affordable child care and preschool to support working parents and to ensure that children start kindergarten ready to learn. During the first five years of life, children learn critical skills such as language and socio-emotional regulation, which provide a foundation for lifelong learning. High-quality preschool and child care can support healthy development and enable parents to work. Unfortunately, too many children are left behind by the status quo. In fact, differences in children’s cognitive abilities by income are evident at only 9 months old and significantly widen by the time children are age 2. Early learning has positive impacts for children, families, and the economy. It’s time to work to put these programs within reach.

Ohio families need access to high-quality child care and preschool
Ohio has 847,640 children under age 6, of whom have all available parents in the workforce.

High-quality child care and preschool programs help narrow school readiness gaps, which is particularly important for children of color and those living in low-income families.

The cost of child care is out of reach for families
Annual costs at a child care center in Ohio average $16,318 for an infant and a 4-year-old, which is 27 percent of the median income for families with children.

For low-income families and people of color, the average cost of child care would constitute the majority of income in most cases.

The current child care system is failing Ohio families
On average, the Child Care and Development Block Grant, or CCDBG, serves only 8 percent of federally eligible children in Ohio. This results in only 45,600 Ohio children served through CCDBG funds. Of those served, 80 percent attend licensed or regulated center-based care.
Ohio families need greater access to high-quality preschool programs

The Ohio Public Preschool Program serves the 3- and 4-year-olds living in families up to 200 percent of the federal poverty level. The program is free for children in families below 100 percent of the poverty level, but fees apply to those above that level. This preschool program meets 4 quality benchmarks set by the National Institute for Early Education Research and spends $4,000 annually per student.

In Ohio, 12 percent of 3-year-olds and 17 percent of 4-year-olds are enrolled in a public preschool program.

Investing in high-quality early learning programs affects economies

Making child care more affordable for families can increase mothers’ workforce participation, resulting in a boost to the state’s economy.

In Ohio, if child care costs did not exceed more than 10 percent of a family’s income, the state’s economy would increase nearly $65.83 million.

We can do better for Ohio families

The Center for American Progress proposes two solutions to put high-quality child care and preschool within reach for Ohio families and create an early childhood learning continuum for children:

• A new High-Quality Child Care Tax Credit would help families afford high-quality care for their children. This tax credit would benefit an estimated 230,100 children in Ohio and save families an average of $4,571 per year on child care costs.

• Voluntary universal preschool for all 3- and 4-year-olds. This would increase access for 261,700 children in Ohio.

Jessica Troe is the Policy and Outreach Coordinator for the Early Childhood Policy team at the Center for American Progress.
