Wyoming families need access to affordable child care and preschool to support working parents and to ensure that children start kindergarten ready to learn. During the first five years of life, children learn critical skills such as language and socio-emotional regulation, which provide a foundation for lifelong learning. High-quality preschool and child care can support healthy development and enable parents to work. Unfortunately, too many children are left behind by the status quo. In fact, differences in children’s cognitive abilities by income are evident at only 9 months old and significantly widen by the time children are age 2. Early learning has positive impacts for children, families, and the economy. It’s time to work to put these programs within reach.

Wyoming families need access to high-quality child care and preschool
Wyoming has 49,329 children under age 6, 65 percent of whom have all available parents in the workforce.

High-quality child care and preschool programs help narrow school readiness gaps, which is particularly important for children of color and those living in low-income families. Forty percent of Wyoming children under age 6 live in low-income families.

The supply of high-quality child care is limited. Many states have implemented quality rating and improvement systems (QRIS) to assess and support quality in early care and education programs, but participation rates across the United States are low, and very few programs have been awarded the highest-quality ratings.

The cost of child care is out of reach for families
Annual costs at a child care center in Wyoming average $16,951 for an infant and a 4-year-old, which is 23 percent of the median income for families with children.

For low-income families and people of color, the average cost of child care would constitute the majority of income in most cases.
The current child care system is failing Wyoming families
On average, the Child Care and Development Block Grant (CCDBG) serves only 19 percent of federally eligible children in Wyoming. This results in only 3,200 Wyoming children served through CCDBG funds. Of those served, 58 percent attend licensed or regulated center-based care.

Wyoming families need greater access to high-quality preschool programs
Wyoming currently does not have a state-funded preschool program. Across the United States, 43 states and the District of Columbia offer state preschool programs for eligible 3- and 4-year-olds. Eligibility requirements include risk factors such as being in foster care, a family history of abuse or neglect, and low parental education levels, as well as locally determined risk factors. State spending on preschool averages $4,976 annually per student.

In Wyoming, 8 percent of 3-year-olds and 11 percent of 4-year-olds are enrolled in a public preschool program.

Investing in high-quality early learning programs affects economies
Making child care more affordable for families can increase mothers’ workforce participation, resulting in a boost to the state’s economy.

If child care costs did not exceed more than 10 percent of a family’s income, the impact on workforce participation would translate into a 1.2 percent increase to the U.S. economy, equal to more than $210 billion.

We can do better for Wyoming families
The Center for American Progress proposes two solutions to put high-quality child care and preschool within reach for Wyoming families and create an early childhood learning continuum for children:

• If child care costs are capped at 10 percent of a family’s income, Wyoming families would save $1,820 a year.
• Voluntary universal preschool for all 3- and 4-year-olds. This would increase access for 14,400 children in Wyoming.
