New Hampshire residents value the state’s centurieslong commitment to promoting freedom and equality, but this promise has not been realized for women and their families. Moving forward, New Hampshire’s women need policies that ensure economic security, prosperity, and workplace equality.

Women need policies that reflect their roles as providers and caregivers. In New Hampshire, mothers are the sole, primary, or co-breadwinners in 65.6 percent of families, and these numbers are higher for some women of color. The following policy recommendations can help support the economic security of women and families in New Hampshire.

**Promote equal pay for equal work**

Although federal law prohibits unequal pay for equal work, there is more that can be done to ensure that both women and men across New Hampshire enjoy the fullest protections against discrimination.

- New Hampshire women who are full-time, year-round workers earned about 79 cents for every dollar that New Hampshire men earned in 2017; if the wage gap continues to close at its current rate, women will not reach parity in the state until 2079. The wage gap is even larger for black women andLatinas in New Hampshire, who earned 65.2 cents and 63.2 cents, respectively, for every dollar that white men earned in 2016.

- Due to the gender wage gap, each woman in New Hampshire will lose an average of $361,240 over the course of her lifetime.
Increase the minimum wage

Women constitute a disproportionate share of low-wage workers; raising the minimum wage would help hardworking women across New Hampshire and enable them to better support their families.

• Women make up nearly two-thirds of all minimum wage workers in the United States. About three-quarters of all minimum wage workers in New Hampshire are women.

• In New Hampshire, the current minimum wage is $7.25 per hour. The minimum wage for workers who receive tips is $3.26 per hour. Almost 4 out of 5 tipped wage workers in New Hampshire are women.

• Increasing the minimum wage to $15 per hour by 2024 would boost wages for 107,000 women in New Hampshire and more than 23 million women nationally. Fifty-seven percent of the New Hampshire workers who would be affected by raising the minimum wage to $15 are women.

Guarantee access to quality health care

Women need access to comprehensive health services—including abortion and maternity care—in order to thrive as breadwinners, caregivers, and employees. To ensure women are able to access high-quality care, states should, at minimum, strengthen family planning programs such as Title X; protect Medicaid; and end onerous restrictions that reduce access to abortion care and undermine the patient-provider relationship. At the state level, New Hampshire should ensure that women have access to the full spectrum of quality, affordable, and women-centered reproductive health services.

• In 2014, more than 65,000 women in New Hampshire were in need of publicly funded family planning services and supplies, and 20 percent of those women were uninsured.

• Threats to repeal pre-existing condition protections under the Affordable Care Act would impact millions of women. More than 67 million women and girls nationally have pre-existing conditions and could be denied insurance, including about 269,000 women in New Hampshire.

• Title X—the nation’s only federal domestic program focused solely on providing family planning and other related preventive care, such as contraception, sexually transmitted infection testing, and cancer screenings—served about 14,500 women in New Hampshire in 2017, down from about 17,700 women in 2014. Title X funding has itself increased slightly, from about $1.44 million in 2014 to about $1.48 million in 2017.
• New Hampshire has restrictions on abortion care: Public funding is available for abortion only in cases of life endangerment, rape, or incest, and parental notification for young people under age 18 is required.\textsuperscript{17}

• New Hampshire’s infant mortality rate—3.7 deaths per 1,000 live births—is lower than the national rate of 5.9 deaths per 1,000 live births.\textsuperscript{18} The state’s maternal mortality rate is 15.8 maternal deaths per 100,000 live births,\textsuperscript{19} compared with the national rate of 18 maternal deaths per 100,000 live births.\textsuperscript{20}

Ensure workers have access to paid sick days

Everyone gets sick, but not everyone is afforded the time to get better. Many women go to work sick because they fear that they will be fired for missing work. Allowing employees to earn paid sick days helps keep families, communities, and the economy healthy.

• More than 34 million U.S. employees, or 29 percent of the nation’s private sector workforce, do not have access to paid sick days.\textsuperscript{21}

• In New Hampshire, the rate is even higher: 38.9 percent of private sector workers, or 202,223 people, do not receive paid sick days.\textsuperscript{22}

Ensure fair scheduling practices

Many low-wage and part-time workers—approximately 60 percent of whom are women\textsuperscript{23)—face erratic work schedules and have little control over when they work and for how long.

• More than 1 in 4 low-wage U.S. workers have a schedule that is nonstandard—that is, outside of the traditional 9-to-5 workweek.\textsuperscript{24} This can be especially difficult for parents who need to plan for child care.

• In addition to threatening the economic security of these workers and their families, unfair scheduling practices are often accompanied by reduced access to health benefits and increased potential for sexual harassment.\textsuperscript{25}

• In 2016, the New Hampshire Legislature passed a law providing workers with the right to request flexible working arrangements without fear of retaliation.\textsuperscript{26}
Provide access to paid family and medical leave

Access to paid family and medical leave would allow workers to be with their newborn children during the critical early stages of the child’s life; to care for an aging parent or spouse; to recover from their own illness; or to assist in a loved one’s recovery.

- Only 17 percent of civilian workers in the United States have access to paid family leave through their employers.27

- A bipartisan group of legislators and advocates has been building momentum for a statewide paid family and medical leave policy.28

- Unpaid leave under the Family and Medical Leave Act (FMLA) is inaccessible to 58 percent of working people in New Hampshire. Workers and families in the state need paid family and medical leave for reasons other than childbirth. For example, nearly 30 percent of workers in New Hampshire are at least 55 years old, and in fewer than 15 years, the state’s population that is ages 65 and older will grow by nearly 45 percent.29 New Hampshire’s aging population means an increase in older adults with serious medical conditions who will need additional care.

- National data show that 55 percent of employees who take unpaid leave through the FMLA use it for personal medical reasons. Twenty-one percent of workers use leave for the birth or adoption of a child, while another 18 percent use it to care for a family member.30

Expand quality, affordable child care

Families need child care to ensure they are able to work, but many lack access to affordable, high-quality child care options that support young children’s development and meet the needs of working families.

- Seventy percent of New Hampshire children younger than age 6 have all available parents in the workforce, which makes access to affordable, high-quality child care a necessity.31

- For a New Hampshire family with one infant and one 4-year-old, the annual price of a child care center averages $22,152 per year, or one-quarter of the median income for a New Hampshire family with children.32

- New Hampshire lags far behind the national average on children enrolled in public preschool, with only 5 percent of 4-year-olds enrolled, in part because the state does not have a state-funded pre-K program.33
Protect workers against all forms of gender-based violence

Women cannot fully participate in the economy if they face the threats of violence and harassment. There are a number of steps lawmakers can take to prevent violence against women and to support survivors, including establishing greater workplace accountability; strengthening enforcement; increasing funding for survivor support services; and educating the public on sexual harassment in the workplace.34

- In New Hampshire, 38.7 percent of women have experienced contact sexual violence in their lifetimes,35 and 35.4 percent of women have experienced noncontact sexual harassment.36 Given that research at the national level suggests that as many as 70 percent of sexual harassment charges go unreported, these state numbers likely only scratch the surface.37

- Thirty-five percent of New Hampshire women have experienced intimate partner violence, which can include physical violence, sexual violence, or stalking by an intimate partner.38 Experiencing intimate partner violence has been shown to hinder women’s economic potential in many ways, including loss of pay from missed days of work and housing instability.39

Protecting the rights of incarcerated women

The growing problem of mass incarceration in the United States hinders the economic potential of those affected and disproportionately harms communities of color.40 Incarceration can have a particularly destabilizing effect on families with an incarcerated mother, especially if that woman is a breadwinner. The experience of incarceration is also uniquely traumatic for women in ways that can deter long-term economic security, even after release.41

- The incarceration rate in New Hampshire is 211 per 100,000 people.42 Approximately 9.1 percent of prisoners in New Hampshire are women.43

- Women are the fastest-growing segment of the overall U.S. prison population, but there are fewer federal prisons for women than there are for men, contributing to overcrowding and hostile conditions for incarcerated women.44

- Incarcerated women suffer from a wide range of abuses at the hands of the prison system, including lack of access to menstrual hygiene products; lack of adequate nutrition and prenatal care; shackling during pregnancy and childbirth; and separation from and further disruption in relationships with children for whom they are primary caregivers.45
Promote women’s political leadership

Across the United States, women are underrepresented in political office: They constitute 51 percent of the population but only 29 percent of elected officials.46

• Women make up 50 percent of New Hampshire’s population but only 31 percent of its elected officials.47

• Women of color constitute 4 percent of the state’s population but only 1 percent of its officeholders.48

Shilpa Phadke is the vice president of the Women’s Initiative at the Center for American Progress. Diana Boesch is a research assistant of women’s economic security for the Women’s Initiative at the Center. Nora Ellmann is a research assistant for women’s health and rights for the Women’s Initiative.

36 Noncontact unwanted sexual experiences include harassment, unwanted exposure to sexual body parts or making a victim show their body parts, and/or making a victim look at or participate in sexual photos or movies. See Centers for Disease Control and Prevention, “Sexual Violence: Definitions,” available at https://www.cdc.gov/violenceprevention/sexualviolence/definitions.html (last accessed October 2018).
